Journal No 1.

Feb 7th 1966 Mon.

0945 L FTW.

11.45 Depart FTW in Toyota with mate, Harry a Pete following — Police & Service Station. Desolation all day. Weather: Sunny clear. Mileage Toyota 8495. Stop for petrol and. Depart Carlton 12.20

Before Leyman stopped - left front wheel tyre tube leaking - changed wheel. To Leyman for tube etc. 14.35.

Camp 61a. Hot clear day. Max and me in Toyota pulling trailer - both with camp covering - well loaded with all kinds of equipment. Personal gear in smaller suitcases.

2

17.55 Wonga. Still clear
Species Lists:
Scotch 4-7.

160+m. Myzantha melanocephala
1

Cooler very day
1900 Into Albany - another flat type one trailer - pressure punctures quite recently Diesel engine & bridge. Had a white type mended (at cafe) Then pushed on through Albany to Cuteman (Wagga) turn off 5 miles out. Now dark & we drove for some miles till 21.00 then pulled in beside dry creek bed to camp. Our own way out from Albany the car very noticeably changed from time to

time as we descended into slightly lower and more timbered valleys where the air was deliciously cool while on the higher ground it was moist - warm almost "north-windish". Now at our camp No 1 at 2200 hrs : 29.3" 66° 76% rel. humidity. clear sky, moon rose ca 2100 hrs. Some mates worthy Albany Command Bob Weeks who brought up Peter Taylor & Harry Wright in a Ford Sedan has now left us at Albany and Max, Peter, Harry, Angus (typical Kurt Muller bushman) and I are settling down for our first night together with good equipment (stretchers, sleeping bags, etc)

4.

Do not have opportunity to observe the country this evening as it was dark but ~~as far~~ as far as I can judge it is mixed savannah. Savannah / Woodlands & Grasslands. The birds seen in Victoria today have been few & typical - have only written down 2-3 but hope to start serious observation tomorrow.

Mail instruments: Dark adapted Aneroid Barometer, Lambert Azimuth Compass & Prismatic Compass.

Feb 8th, Tues. 05 20. Clear fine

Can see now that in Savannah woodlands with low hills close. Grey Box, Yellow Box & Red Gum

0600 29.9" 58° then 70% 5

Birds active:

Myzomela nigrita sanguinolenta - several
Phylidonyris albifrons - several
Rakatira novaecapitis 2-3
Gymnorhina tibicen 2-3
~~Peregrine~~
Melithreptes pectoralis several
Falco peregrinus, ♂ moved
swiftly over camp
Dacelo gigas 2-3
Platycercus eximius 2.
Eudynamis cyanocephala 2
Pardalotus 1-2
Corvus several
Eurystomus orientalis - Rollers
fly-flycatch type of coup
pursued by Noisy miner -
not noticeably. Rollers dull
brown color markings. -
Swift noted.
Psephotus haematonotus
pair

Notebook entries

The finding up of the Spirit Hawk by Mathers somewhat during certain the nights — the evil lights. He found to be one of several magic emblems used & have collected and preserved two. Also one form a figure (drawing) which has been preserved.

The calling up of the magic light it was immediately besieged with a mass unholy & impish & base insects and a number of these have been collected.

Notwithstanding these notes are indeed observations on Kenneth

has been made
Anyone making a
present – a large
centipede (about 6" in
length) emerges from
the shadows under
the radiator into the
light (on the floor)
& goes and sits
motionless under
the table and on the
floor 21 yards [illegible]
[illegible] from the
radiator. Suddenly both
the mouth and the
two front pairs
of legs fall
off & right
in front of me
on the floor
by the radiator
& [illegible]
[illegible] centipede

Under a grass
covering earth.

were observers & catch moths.

The evening mist seems to have opened out extensively onto black soil grassland plains.

The specimen have been pinned, the next readings are now 23.25 ; - 29.3" 78° 50% RH.

The mileage on arrival no 9921

I have just walked a few yards away from the group and have stood a while in silence to let the place & its teeming wild life - insects sounds, bird calls. breathing wild smells

Habitats & Kangaroo Attack Creek.

Habitats

Riverbed & Riparian Eucalypts

The partly dry creek bed with its broken chain of pools and its banks lined each side with white Eucalypts surrounded by some extent a distinct habitat arising from several features

(1) Regular annual flood, [illegible] creates bare patches for Kingfishers, Herons, [illegible]

(2) The [illegible] most contenders have [illegible] with [illegible] Pardalotes, [illegible] Honeyeaters, Pardalote? [illegible]

(3) In the heat of the day the
creek bed — empty — the
surrounding Bush
impoverished and parched
looking. Here & there
a few Eucalyptus trees
Eucalyptus

4 The pools provide drinking
places — probably a large
number of species
— including Ducks, Waterfowl —
Coot, Moorhen. also Native
Cats.

The Storks-Wattles in many
places from the edge of the
the edge of the creek bank but
is obviously different — the
last records of the day

Notes on Amphima

Breeding: From the number of specimens collected — ranges or partly worn, or just plumage — I would assume that breeding is (temporarily?) over for some species.

Worn plumage = due for post nuptial moult?

Can't distinguish males — both sexes collected. Yet the males are child actively singing what I would have thought were definitely territorial songs. Are the birds still nesting? Still finding young? Need for collection of specimens for examination of gonads.

Do the males — they are recorded continue territorial song while moulting — singing? Are they silent & shed, again — a second moult?

Other species in museum Diego:- 180

young plumage — ♀ &
collectors Still Lang
very advanced - labeled ♀
collectors were also in young
plumage. No immature seen —
one very fresh skin.

Micraca flavigastra: 1 juv sp
coll. ∴ at least two breeding
Rhipidura rufiventris: adults

Graucalus melanops: 1 ♂ coll.
seen Like new plumage —
- believed to be juvenile: dark
ups — the - some feathers
unstreaked - head bars black &
white as well as throat
flecky black on chest.
Queried immature males
brown. One other Sp
brown - called immature ♂
or a ♀

Rhipidura rufifrons indistincta 2 Sp
coll. appear immature
from presence yellow
plumage - bill / 2 sp —
1 adult? & tiny yellow
feathers behind eye

Holcaeus pyrrhopygus: I've
could watch for
three pretty constantly
presumably moulting into
new plumage after breeding
Tachyphonus luctuosus!
a number of nests
shallow & have been
found but none really
fresh & not obviously
more than two days
old. — found Thraupis
episcopus cana-ta
call on good plumage
eggs. one ♂ also feeding
young — one of brood
at least partly complete &
temporarily stopped but
the rest of all depends
Cyclopsis hypoxantha: I've
call. moulting new
bill feathers — as
completing a moult.
But another pair seen
building with a mate here.
